

Internal Meeting #2

📅 Date	August 1, 2026
--------	----------------

Date	Tuesday, 1 August 2026
Attendees	Sandra Shravan Karthikeya Lizhou Junlong
Purpose	Internal team planning, role allocation, technology research, and preparation for the client meeting
Next Meeting	Tuesday 4th Aug, client meeting
Meeting Lead	Sandra
Meeting Prepared/Coordinated	Sandra
Minute Taker / Transcription	Sandra

Discussion Points

1. Weekly Progress and Documentation

The team discussed completing the weekly contribution submission using a shared document so that all members could add their individual contributions before one final group submission. Since the project was still in the research and planning stage, the Week 2 submission would mainly include meetings held with the facilitator and client, along with preliminary research into platforms, technologies, and project responsibilities.

Decision: A shared document will be used for the weekly submission, with each member adding their contribution before final submission.

2. Website Platform and Technology Research

The team discussed the client's existing Squarespace website and whether the project should continue using Squarespace or move to another platform. WordPress was raised as a possible alternative due to its flexibility, maintainability, and potential affordability. The team agreed that no final platform decision should be made until the available options, costs, technical requirements, and team skills had been reviewed.

The team also identified the need to clarify the client's current hosting arrangement and obtain information about the existing domain and hosting environment.

3. Technical Roles

The team discussed splitting responsibilities between frontend and backend development. It was agreed that maintaining consistent technical roles would provide better continuity than frequently rotating development responsibilities.

The preliminary allocation discussed was:

- **Shravan:** Frontend development
- **Karthikeya:** Frontend development
- **Junlong:** Backend/full-stack development
- **Lizhou:** UI/UX and design support
- **Sandra:** Project coordination and support across frontend and backend activities

4. UI/UX and Wireframing

The team discussed the importance of creating a basic wireframe before development begins. A wireframe would provide a clear starting point for implementation while still allowing the entire team to contribute ideas.

Sandra volunteered to prepare the initial wireframe, after which the team would review it and incorporate additional ideas and changes.

5. Tech Stack and Hosting

The team discussed selecting a technology stack that aligns with existing team skills. Next.js and React were discussed as possible options due to Junlong's existing experience.

Hosting options discussed included:

- AWS
- Google Cloud
- Platform-based hosting suitable for Next.js

The team agreed that cost, ease of deployment, maintainability, and compatibility with the selected technology stack should be considered before making a recommendation to the client.

6. Team Skills Assessment

Each team member agreed to provide a short summary of their technical skills and preferred development areas in the group chat. This information would help determine which technologies and platforms were most appropriate for the team.

7. Preparation for Client Meeting

The team agreed that the next client meeting should present a clearer proposed direction for the project, including:

- Recommended technology stack
- Hosting options
- Website/platform approach
- Team roles and responsibilities
- Cost considerations

The team planned to finalise these recommendations internally before presenting them to the client.

8. GitHub Repository

Sandra raised Carla's request to be added to the team's GitHub repository.

Decision: Karthikeya agreed to add Carla to the repository.

Action Items

Action Item	Responsible
Add individual contributions to the shared weekly submission	All members
Review and submit the completed weekly submission	Sandra
Send technical skills and preferred areas to the group chat	All members
Research technology stack and hosting options, including cost, pros and cons	Junlong
Prepare an initial website wireframe	Lizhou/Shravan
Add Karla to the GitHub repository	Karthikeya
Review platform, hosting and technology recommendations	Junlog
Coordinate upcoming team meetings	Sandra
